**PCS AG, an IT company from Solingen, Germany has developed this solution custom-built for working with all SQL Server-based ERP applications and the ECM System windream**

For optimized workflows and a smooth execution of ERP applications used in combination with windream as an archive and search module PCS AG provides **PCSarchiv** and **iHotsearch**. Users of business management software which is based on a SQL Server (e.g. MS SQL Server, ORACLE, MySQL, etc.) benefit from these new software solutions.

### PCSarchiv connects ERP applications and windream

A lot of companies use windream for the revision-proof archiving of ERP documents. Our development **PCSarchiv** now offers the possibility of automated archiving.

ERP documents, such as receipts, contract notes or order confirmations will be archived automatically in the windream environment while printing them.

**PCSarchiv** gets the information from the database fields in the ERP application during the printing process, which are then transferred to windream and written in the index fields.

**PCSarchiv** functions as a standalone system which runs independently from the ERP application. The advantages are: It works with any other version of your ERP application and even in case of upgrading your ERP software **PCSarchiv** is not influenced and does not require an update.
