## UNIQUE

Identity Access Management

**Complete your Business-Network with our new developed access platform.**

### Fields of application

With Access Platform, safe and straightforward connection without VPS

### Technische Daten

#### Server 1 (Access Server):

- Microsoft Windows Server 2003 or higher
- Microsoft.NET Framework 2.0
- Internet Information Server (IIS)
- SSL-certificatet
- Microsoft SQL Server 2008 Express

#### Server 2 (Terminal Server/Remote Desktop Services):

- min. Microsoft Windows Server 2003 or higher – with adequate licensing

#### Server 3 (Terminal Server Gateway/Remote Desktop Gateway):

- Microsoft Windows Server 2008 or higher

At the client site there is only required an operating system (Win XP SP3 or higher) and your software has to be able to operate with a terminal server.

### Fast and safe Unique IAM access platform

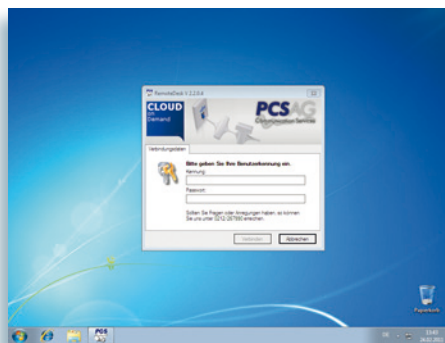

Based on the Microsoft RDP technology, Microsoft Terminal Server Gateway/ Remote Desktop Gateway and the Microsoft SQL database, our platform offers you individual applications without requiring a complete user interface.

The system can be used on both server farms and stand-alone servers.

And it includes a load balancing technology, so fast traffic is guaranteed.

With its central user administration and management functions you get automatically generated analyses and it is possible to activate scheduled and time-controlled accesses for the users.

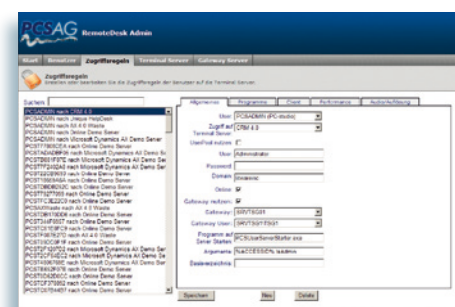

You can create new users – real and virtual ones. Real users are clients of your Unique IAM program. Virtual users are for short-term or demonstration purposes. Another special function is to support your users online (the admin can take over the session).

With our Client-Program (1MB) you get fast and safe access to your Company Network

The access operates without VPN-Server or VPN-Gateways. Through the application use of the encrypted connection over HTTPS and Port 443, the complicated configuration of firewalls or further access systems are unnecessary.

The usage of Remote Desktop Protocols make it possible to integrate easily local resources

Configuration of access policies and settings for different users

(Printer or Storage), whereby the communication runs furthermore encrypted over Port 443.

### Advantages

- fast and reliable connection
- load balancing
- analysis of Microsoft SPLA licenses
- based on SQL database
- integration local resources
- enables an access over Password or Token
- quick access from everywhere to Notebook, Tablet-PC, iPad or comparable devices
